5. Full Stack Software Engineer

Job Title: Full Stack Developer

Key Responsibilities:
-A full stack developer designs, develops, and maintains both front-end and back-end components of web applications to ensure seamless integration between user interfaces and server-side logic. They build robust APIs, manage databases, and collaborate with teams to deliver scalable, high-performing software solutions

Minimum Qualifications:
- Strong proficiency in JavaScript/TypeScript or another modern programming language. Experience with frontend frameworks such as React.js, Angular, or Vue.js. Strong backend development experience with technologies such as Node.js, Java, Python, .NET, or similar. Good understanding of HTML5, CSS3, and responsive web development. Experience designing and consuming REST APIs. Strong knowledge of SQL databases such as MySQL or PostgreSQL. Familiarity with NoSQL databases such as MongoDB is an advantage. Experience with Git/GitHub/GitLab and version-control practices. Understanding of software development lifecycle and debugging practices.

Location: Gurgaon
