Job Description

Meet the team:

Isovalent, now part of Cisco, is the company founded by the creators of Cilium and eBPF. Cisco Isovalent builds open-source software and enterprise solutions solving networking, security, and observability needs for modern cloud native infrastructure. The flagship technology, Cilium, is the choice of numerous, industry-leading, global organizations. Isovalent has joined forces with Cisco Secure Workload to ensure security across the network.

Cisco Secure Workload is seeking a junior UI/Full Stack developer to assist in developing features for policy,

vulnerability management, and more.

Your Impact:

- Establish relationships and collaborate effectively with your team.
- Collaborates with others on projects and works on small-to-medium features from technical design through completion.
- Applies understanding of the software development lifecycle and how various agile engineering practices can be used in own projects (e.g., requirements analysis, design, coding, unit testing, acceptance testing).
- Participates in delivery of technical design features with guidance. Analyze information, ask questions and confirm understanding with your team.
- Write functional clean code, unit tests, and E2E tests with some guidance.
- Assists in code reviews and addresses code review feedback.
- Monitors and triages incident reports and participates in postmortems and potential on-call duties.
- Estimates time to complete assignments and communicates status, blockers, and delays to the team.

Minimum Qualifications:

- Bachelors + 2 years of related experience OR Masters + 0 years of related experience.
- Requires basic knowledge of development theories, principles and concepts; has exposure
