Position Summary

Plans, designs, develops and tests software systems or applications for software enhancements and new products including cloud-based or internet-related tools. Use this position if company does not breakout software development positions such as Software Engineer (Applications) or Software Engineer (Systems) and/or is involved in full stack development. Software development engineers using common development methodologies including Waterfall and Agile should be matched to our software development engineering roles. Employees focused on ensuring products (including websites) and hosted networks are designed and developed to be cyber-safe and compliant are typically matched to one of our software development engineering roles. For cloud databases, may be matched to Data Management - Storage Engineer (TE.DMSE) or for hosted networks, to Network Engineering (TE.INNE) or Network Systems Administration (TE.INNS). Employees focused on administering and hardening internal processes and systems against outside penetration and attack, match to Information Security (TE.ICIO).
