Dear SalaryBox Hiring Team,

SalaryBox's mission to transform payroll and attendance for 60 million MSMEs is the kind of large-scale, high-impact problem I'm drawn to—exactly why I joined Compro Technologies, where I'm building a K-12 LMS serving over a million users. Your emphasis on ownership and shipping products that reach millions aligns perfectly with how I approach engineering, and I'm excited to bring my full-stack capabilities to help scale your platform further.

I've taken ownership of end-to-end product features in a startup environment. I architected and delivered the Roster Service—modeling six core entities and integrating external data sources to automate school onboarding—alongside a Calendar Service and an event-driven transcript platform maintaining 99.9% availability. I've also shipped 15+ REST APIs and 10+ GraphQL APIs with production-grade foundations: JWT auth, validation, caching, rate limiting, and centralized logging. This experience designing systems for real user scale, debugging production issues, and continuously improving reliability directly matches what you're looking for.

I'm confident I can contribute meaningfully from day one. I'd welcome the chance to discuss how my full-stack experience and ownership track record can help SalaryBox continue its rapid growth.

Sincerely,

Samyak Jain
