New

Software Engineer

Apply

Bangalore, India

Want to be a bswifter?

At bswift we've been transforming benefits administration since 1996, making it simpler, smarter, and more human. Our state-of-the-art, cloud-based technology and services empower employees to understand, manage, and love their benefits. From downtown Chicago, and remotely across the country, we serve thousands of companies and millions of people nationwide, reducing administrative burdens and freeing HR teams to focus on creating thriving, people-first workplaces.

We're looking for motivated and goal-driven individuals who share our passion for delivering excellence and creating solutions that make a difference. The reward is a fun, flexible and creative environment with ample opportunity for professional and personal growth. If you love the bswift values of pursue excellence, embrace accountability, deliver superior service, and be a great place to work, we want to hear from you!

You will join the team as a **Software Developer**, responsible for designing, building, and maintaining scalable backend systems and APIs that power web and mobile applications. The role requires proficiency in **backend engineering, cloud services (preferably AWS), databases**, and developing **secure, high-performance systems**.

You'll work closely with software developers, product managers, and cross-functional teams to deliver reliable, secure, and performant services that enable seamless user experiences

1. Solution Design & Development

- Design, develop, and maintain innovative, customer-centric, high-performance, secure, and robust applications.
- Build and integrate scalable backend services with responsive frontend interfaces
- Work with architects and other software engineers to develop scalable solutions

2. System Decomposition & Iterative Delivery

- Break down large, complex systems into smaller, manageable implementation slices.
- Use prototypes and iterative delivery to de-risk unknowns and validate assumptions.

3. Product Ownership & Lifecycle Management

Autofill complete!

- Take ownership of features and systems from prototype to production deployment and operations.
- Ensure reliability, maintainability, and performance throughout the lifecycle.

4. Observability & Reliability

- Implement scalable logging, monitoring, and tracing across full-stack systems to enhance observability and system reliability
- Ensure system health, detect anomalies, and maintain operational visibility.

5. Deployment & Release Management

- Integrate changes into CI/CD pipelines across frontend and backend using IAAC.
- Ensure smooth, automated, and reliable build and deployment processes.

6. Code Quality, Testing & Performance

- Write clean, reusable, and well-documented code across the stack.
- Conduct unit, integration, and end-to-end testing.
- Optimize performance of backend systems and frontend interfaces.

7. Cloud & Security

- Design and implement scalable, secure, and cost-efficient cloud-native applications using AWS services such as S3, CloudFront, API Gateway, and Lambda.
- Follow secure coding practices aligned with OWASP guidelines.
- Remediate security issues and ensure safe handling of sensitive data.
- Support security reviews and compliance audits.

Knowledge, Education, and Experience

- Bachelor's degree in engineering, Computer Science, or a related field.
- 3-5 years of professional experience in software development.
- Strong design and coding skills, with experience in code reviews and SDLC processes.
- Solid problem-solving and analytical abilities.

- Experience with AWS services such as DynamoDB, SQS, EventBridge, Lambda, and API Gateway.
- Experience with CI/CD tools like GitHub Actions, Jenkins, or AWS CodePipeline.
- Must have proficiency in C# /Java, NodeJS, TypeScript, with knowledge of object-oriented programming, design patterns, and best practi
- Experience with SQL, NoSQL databases.
- Hands-on experience with microservices, event-driven architecture, RESTful APIs, and web application development.
- Focus on delivering high-quality, extensible, reusable, performant, reliable, and secure software solutions.
- Familiarity with development tools like Jira, GitHub, and SonarQube.
- Good communication and collaboration skills.
- Experience working in Agile environments.
- Experience with prompt engineering and generative AI is a plus.
